It is well known that Uzbekistan can not perform an export program on world markets, with the exception of the production of raw materials, such as cotton and other raw materials, in foreign markets and sell our products. First of all, it is necessary to accelerate the development and targeted support of industries and enterprises that can be equally competitive in the world market and at the next stage can become the driving force of economic growth, further

modernization and diversification of the economy. At the same time, in the textile and light industry, more profound processing of raw cotton, the export of finished products such as dyed yarn, knitted fabrics and fabrics to foreign countries, active production of modern innovative technologies and design, production of finished textile products.

An in-depth study of the experience of foreign companies, such as Germany, in the development of Uzbekistan's textile

industry in the world economy, the development of the textile industry and technologies, and the creation of exemplary structures for our textile enterprises.

The production enterprises of the textile industry of Uzbekistan are equipped with a high-tech large industrial complex that produces cotton fiber, cotton fiber, socks, knitwear, sewing, not only domestic, but also foreign markets.

Taking this into consideration, the country consistently implements practical measures to ensure the further development of the industry. In particular, in accordance with the Decree of the President of the Republic of Uzbekistan dated December 21, 2016 No. 2687, the program of measures for the further development of the textile and clothing and knitting industries for 2017-2019 was approved.

Today, the country has formed a textile network with a high production potential, numbering about 7000 enterprises. A production capacity of 1.4 million tons of cotton fiber has been created, about 60% of which is used to meet the needs of local textile enterprises.

The Decree of the President of the Republic of Uzbekistan "On Measures to Accelerate the Development of the Textile and Clothing and Knitted Industries" identified a number of priority measures to address existing problems, as well as to expand the production of high-quality textile products and to promote the world market. Gave:

- increase in the share of the textile industry in the economy, increase in the volume and quality of textiles produced in the country;

- a radical revision of the management system of the textile industry;

- further improvement of the system of standardization and certification in the textile industry;

- wide introduction of advanced information and communication technologies into the network;

- Implementation of a cluster model for the development of the textile industry;

- a radical revision of the management system of the textile industry;

- further improvement of the system of standardization and certification in the textile industry;

- wide introduction of advanced information and communication technologies into the network;

- Implementation of a cluster model for the development of the textile industry;

- ensuring a balanced distribution of raw materials and location of established enterprises in close relationship with the development of logistics and engineering infrastructure;

- wide introduction of advanced innovative technologies, know-how, developments in the production process, localization of production of modern models and accessories;

- Improvement of the system of training, retraining and advanced training of the textile industry.

It should be noted that this Decree is an important step in the practical implementation of the Concept of Administrative Reforms in the Republic of Uzbekistan, approved by Presidential Decree No. PP-5185 of September 8, 2017, which provides for further reduction of administrative influence on economic sectors and expansion of market management mechanisms. In addition, the head of state supported the offer of the textile industry enterprises, the shareholders' meeting of "Uzbekengilsanoat" and a number of agencies for the establishment of the "Uzto'kimaliksanoat" Association. At the same time, "Uzbekengilsanoat", including the regulatory and economic functions of the state, will be eliminated. The lack of management of the sector management system to meet modern trends in the development of the textile industry and its inability to support manufacturers required this solution. For example: JSC "Uzbekengilsanoat" includes 436 enterprises, accounting for only 6% of the total. The activity of this community is mainly focused on the collection of statistical data, organization of various meetings, organization of exhibitions, its organizational form also does not correspond to the legal status of the joint-stock company.

The experience of foreign countries has shown that one of the most effective forms of development of the textile industry is a cluster organization. This model provides

for the creation of a single production cycle, including the production of raw cotton, the initial processing, the subsequent processing of the product in granaries and the production of finished textile products with high added value. It should be noted that the low efficiency of product testing laboratories, as well as the lack of international accreditation in most of them, hinder the access of domestic textile manufacturers to external markets. To solve these problems, it is planned to develop a complex of standardization and certification systems in the textile industry, including the introduction of international standards.

In 2017-2021 years. The strategy of actions on five development priorities of the Republic of Uzbekistan was adopted. Chapter III - The Strategy for Action focuses on the development and liberalization of the economy; - maintaining high growth rates of gross domestic product by maintaining macroeconomic balance and deepening structural and institutional changes based on medium-term programs;

- the development of international economic cooperation, including the expansion of relations with leading international and foreign financial institutions, the continuation of a carefully thought out foreign debt policy and the effective use of foreign investments and credits; as well as their own goals.

The prospects for the development of Uzbekistan's textile industry in the world economy, the mutually beneficial cooperation of developed countries, the experience of a number of economic transformations in them, and the widespread use of innovative technologies are, of course, of great interest for Uzbekistan, which seeks to adopt economic modernization

in the modern textile industry as an active participant in the international division of labor . Thus, Uzbekistan became a member of powerful groups in the economic cooperation of a number of international organizations. It is very interesting to analyze the state and prospects for expanding cooperation between developed countries and Uzbekistan.

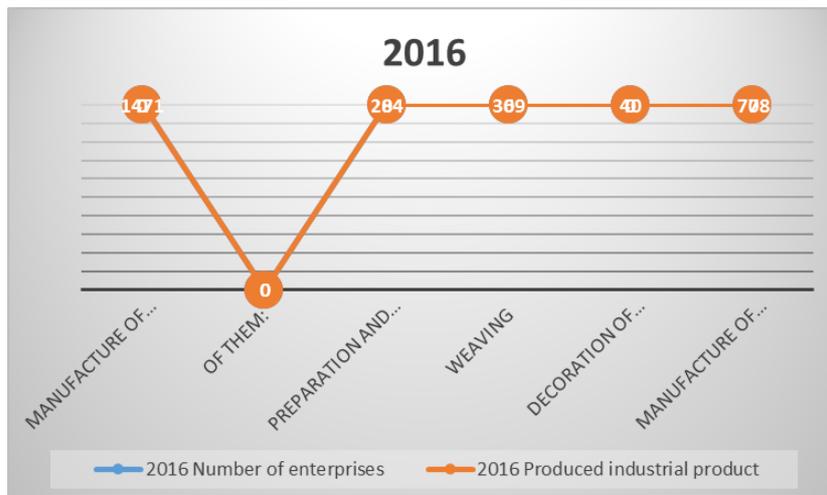

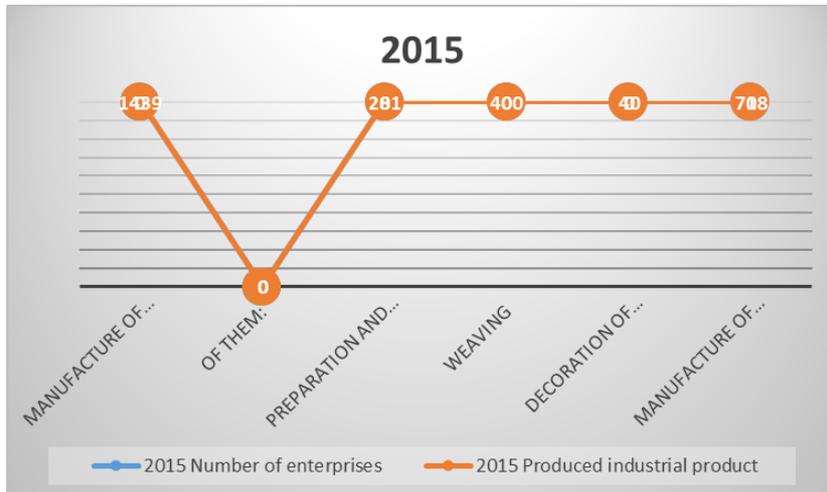

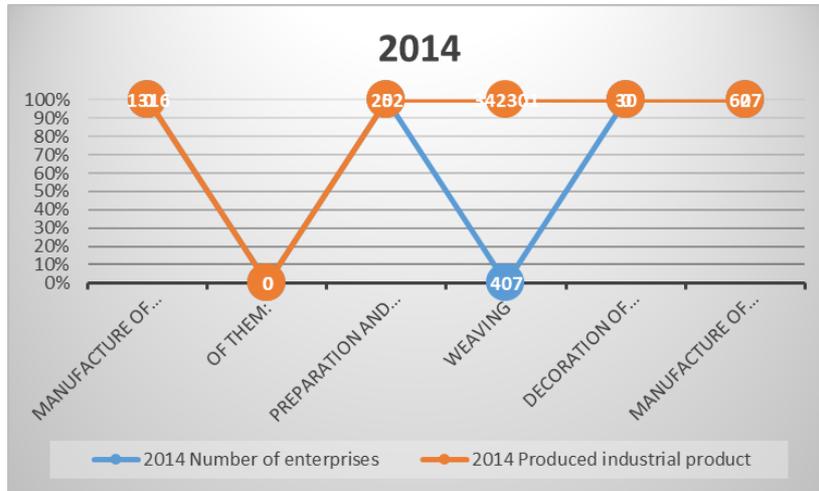

The volume of production of small enterprises and microfirms in textile production in the Republic of Uzbekistan. Fig.1.

	2014		2015		2016
