Abstract: This article highlights the issues of one of the sociological research methods as sociometry. The scientific foundations and the need for empirical research are widely disclosed in it. Wide information is given on the application of the sociometric method in small groups. Therefore, this article emphasizes the need and relevance of this method in the study and study of youth

Keyword: Sociometry, empirical research, study, group, profile, observation, research method, theory, individual, socialization, sociology.

Introduction. Empirical sociological research is one of the sociological methods. It is a comprehensive and holistic study of the social problem, based on its true, observed expression, in the image of actions and contemplation of individuals and groups, as well as on a specially structured and exactly the same problem plan, method and technique. The peculiarity of empirical sociological research is the collection of facts about the phenomena under study, direct contact with the individuals and their life activity.

Empirical sociological research is the study of questioning, questionnaires, observation, experiment and documentation, and the knowledge of sociometric techniques using experiment. We conducted an empirical study of the small group below using the sociometric method.

In working with the group, the study of the group's own interpersonal relationship, the state of alienation of group members from group activities is the main issue. Because in the various work processes and activities that are carried out with the group, it is important to have a group bond.

Also, involvement of alienated members of the group activity in the group work process increases the effectiveness of working with this group. Whether he is a leader who is working with the group, whether he is a teacher or he is increasing the grouping in the conduct of his work, if he puts an end to the alienation situation from the group activity, the effectiveness of his work with this group will be high.

If the alienation of group members from the activities of the group is not received on time, then the members of this group can get into various bad ways, and as a result, various bad situations can arise. This is especially important and effective in the process of working with young and small groups. Because when working with school-age and student youth, it is necessary to avoid alienation from their group activities, because young people are prone to various external influences during this period.

It is also a very important issue that young people should not be alienated from group activities when today's diverse religious currents and the threat of religious fundamentalism are at stake.

Purpose of the study.

Based on the data of the conducted empirical sociological research, the emergence of alienation from group activity in student youth, the cause of the group members falling into this situation, the impact of individual attitude in the group is studied and analyzed. The outlook of the students of Karakalpak State University, their attitude to the activities of the group were determined.

The initial signs of alienation from group activities in student youth and the process of its origin were studied and analyzed.

The objectives of the study and the issues to be seen:

When analyzing individual relations in a group, it is important to find a solution to the alienation situation of group members from group activities, for this it is important to pay special attention to the processes of individual relations in the group:

- First of all determine the relationship between the person within the group;
- To identify the group leader and members who need to work separately in the group;
- To identify students who will be able to follow their group mates from among the members of the group and be an example to them;
- As a result of the research carried out, it is necessary to determine with which of the group members to work and to determine which of the group members to achieve practical achievements when leading, as well as to develop ways to increase the effectiveness of educational processes.

Object of research.

It is possible to indicate the members of the group under study as an object due to the above problem and research objectives. In the study of the impact of interpersonal relations on the process of alienation from group activities in the group, it is important to examine the interpersonal relationship and relationship of the members of this group.

Subject of research.

Among the community that nurtures and nurtures the individual is the link between itself and society. The cocktail team creates conditions for the comprehensive perfection of the personality of a person in his high views. The subject of the study to be conducted is the influence of individual relations in the group on the process of alienation from group activities.

Scientific hypothesis of the study.

We know that in each group there is a person-to-person relationship between the group members, the group leader and the group outsider, etc. Therefore, the individual relations between the members of the group completely affect the process of alienation from group activities in the group, as well as the internal environment in the group as a result of the influence of certain members in the group and the efforts to achieve performance, reading and achievement are noticeable. With the help of the study, a clear guide and direction will be developed to work with this group on the

impact of interpersonal relationship among group members on alienation status from group activities in the group.

Research method.

It is widely used in the study of individual relationships in the group as a research method – a sociometric survey method.

The working procedure of the study [table 8].

Table 8

No Work to be done. Duration. The result.

1 to develop a research program, to determine the order of the work to be done and to approve the program.

2 generate the questionnaire of the questionnaire and confirm it.

Conducting questionnaire questionnaires from 3 group members approved.

4. to process the results of the survey conducted, analyze the results and develop practical workmanship and recommendations.

To conduct the study, analyze the results and develop practical recommendations.

Analysis of the results of sociological research conducted by 4-year students of the Faculty of philosophy of Karakalpak State University [Table 9]: if we analyze the results of the research conducted by members of the group, the students in the group have a special place and position in terms of knowledge: Tazabay Yuldashev, qonis Qdirbaev, Aydos Djoldasov, Gulmira Perdebaeva, Nodira Norbaeva, Ulugbek Kudiyarov, Iglas Naghaev, Manzura Kengesbaeva.

Ismailova Biybinaz, Kengesbaeva Manzura and Djoldasov Aydos have a special place as students who are able to follow the group behind them, to gain knowledge of the members of the group, to eat, cinema, entertainment and cultural places.

Yuldashev Tazabay and Norbaeva Nodirs were identified as students who could follow the group members through their knowledge from behind. In terms of Education, Perdebaeva Gulmira was also identified as a student who could lead the group with her.

Based on the results of the research studied above, Perdebaeva Gulmira, as a leader in the group, can be noted, since this student has a special place in the group, respectability, as well as the ability of the group to follow behind him in any situation, while his group mates can follow and lean on him in any situation. So the educator or leader who wants to work with this group will also achieve full efficiency if they trust this student to influence the group, in short Perdebaeva Gulmira is a full-fledged leader in the group. Also, the influence of group member Djoldasov Aydos on the group and his role and position in the group can be distinguished separately, since the group does not hide the fact that most students follow this student in the acquisition of knowledge. That is, when working with the group, the effect on the group through the same student will be effective.

Table 9

Sharif of students' name with whom you want to go How do you evaluate the knowledge of group Students in terms of knowledge who you follow from Group to

group in terms of upbringing who you follow from Group to group in terms of who
you do not like who you do not like group from Group to group
To the library to feed to the Internet to the cinema to another place
Perdebaeva G. 1 2 3 4 5
Yuldashev T. 1 2 3 4 5
Abibullaev A. 1 2 3 4 5
